

Heart alumni for their legacy of service. I am confident that this proud history and tradition will continue in the spirit of St. Madeleine Sophie for years to come.

PROTECT OUR COMMUNITIES, NOT THE GUN INDUSTRY

Mr. LEVIN. Madam President, it has been reported that the Senate may consider the misnamed Protection of Lawful Commerce in Arms Act in the near future. I was pleased that this legislation was defeated during the 108th Congress, and I continue to oppose its passage.

This bill would rewrite well-accepted principles of liability law, providing the gun industry legal protections not enjoyed by other industries. It would grant broad immunity from liability even in cases where gross negligence or recklessness led to someone being injured or killed. Enactment of this special interest legislation for the gun industry would also lead to the termination of a wide range of pending and prospective civil cases, depriving gun violence victims with legitimate cases of their day in court.

It would be all the more irresponsible for the Senate to pass the gun industry immunity legislation while also continuing to ignore many gun safety issues that are critically important to the law enforcement community. Recent editorials in major newspapers around the country have highlighted Congress' inability to enact common sense gun safety legislation. An editorial from Monday's edition of the Los Angeles Times stated: Over the last four years, the president and his congressional allies have repudiated or quietly eviscerated key gun laws and regulations. Now they are poised to shield firearms makers and sellers from nearly all damage claims when their products kill or maim.

Thus far, Congress has failed to act to reauthorize the assault weapons ban that expired on September 13, 2004. This inaction allowed criminals and terrorists potential easy access to many of the most powerful and deadly firearms manufactured. In addition, Congress has failed to close a loophole that allows individuals on terrorist watch lists to buy these weapons and has failed to pass legislation that would, at the very least, require a background check for individuals attempting to buy the previously banned assault weapons at gun shows.

Rather than considering a bill to protect members of the gun industry from liability, we should help protect our families and communities by addressing the loopholes that potentially allow known and suspected terrorists to legally purchase military style firearms within our own borders. I again urge my colleagues to take up and pass common sense gun safety legislation that will address these loopholes and the threats they pose.

I ask unanimous consent that the April 11, 2005 Los Angeles Times edi-

torial titled "Remember Gun Control?" be printed in the CONGRESSIONAL RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Los Angeles Times, Apr. 11, 2005]

REMEMBER GUN CONTROL?

After four years of George W. Bush, the notions that some people might be too dangerous or unstable to trust with a firearm or that assault weapons do not belong in civilized society are deadlier than a wild turkey in hunting season.

During Bush's first campaign, a National Rifle Assn. leader quipped, "If we win, we'll have a president where we work out of their office." How right he was.

Over the last four years, the president and his congressional allies have repudiated or quietly eviscerated key gun laws and regulations. Now they are poised to shield firearms makers and sellers from nearly all damage claims when their products kill or maim. Not only is this a gift no other industry enjoys, it's a truly bad idea that even gun owners have reason to oppose.

Last year, Republican congressional leaders simply ran out the clock on the 10-year-old federal assault gun ban, refusing to even call a vote on renewing it despite steady popular support for the law. Bush, who once claimed that he supported the ban, refused to make so much as a phone call to his House or Senate allies to keep it alive. With it died the ban on domestically made ammunition clips with more than 10 rounds, a boon for any disgruntled employee, terrorist or high school student who wants to mow down a crowd. The president also signed a bill that requires the destruction within 24 hours of all records from background checks of gun buyers. And Congress required the Bureau of Alcohol, Tobacco, Firearms and Explosives to keep secret the data that tracks weapons used in crimes.

Meanwhile, a Government Accountability Office study examining FBI and state background-check records found that 35 people whose names appeared on terrorism watch lists were able to buy a gun. Incredibly, a would-be buyer's presence on a watch list does not disqualify him or her from buying a firearm. Because background-check data now must be promptly destroyed, it is impossible to know how many more terrorism suspects might be lawfully armed.

The immunity bill, introduced by Sen. Larry E. Craig (R-Idaho) and Rep. Cliff Stearns (R-Fla.), would protect gun manufacturers and sellers from damage suits by victims of gun violence. It would even block injury suits from gun owners. That means gun owners can't sue if poorly made handguns explode in their hands or fire unintentionally. In many instances, the bill would shield gun dealers who allow criminals to buy a firearm, by severely weakening the ATF's ability to shut down unscrupulous dealers.

This reckless measure, long on the NRA's wish list, has come before Congress before, but enough lawmakers balked. This time, emboldened by last November's GOP victories, there looks to be less resistance. Senate Majority Leader Bill Frist (R-Tenn.) says he's ready to call for a floor vote any time. Unless voters speak up.

TRIBUTE TO DR. MAURICE HILLEMAN

Mr. BAUCUS. Madam President, I rise today to memorialize the life and accomplishments of Dr. Maurice

Hilleman, a renowned microbiologist and native son of Montana.

Dr. Maurice R. Hilleman dedicated his life to developing vaccines for mumps, measles, chickenpox, pneumonia, meningitis and other diseases, saving tens of millions of lives. He died on Monday at a hospital in Philadelphia at the age of 85.

Raised on a farm in Montana, Dr. Hilleman credited much of his success to his boyhood work with chickens, whose eggs form the foundation of so many vaccines. Much of modern preventive medicine is based on Dr. Hilleman's work, though he never received the public recognition of Salk, Sabin or Pasteur. He is credited with having developed more human and animal vaccines than any other scientist, helping to extend human life expectancy and improving the economies of many countries.

According to two medical leaders, Dr. Anthony S. Fauci, director of the National Institute of Allergy and Infectious Diseases, and Dr. Paul A. Offit, chief of infectious diseases at Children's Hospital in Philadelphia, Dr. Hilleman probably saved more lives than any other scientist in the 20th century. "The scientific quality and quantity of what he did was amazing," Dr. Fauci is quoted as saying. "Just one of his accomplishments would be enough to have made for a great scientific career. One can say without hyperbole that Maurice changed the world with his extraordinary contributions in so many disciplines: virology, epidemiology, immunology, cancer research and vaccinology."

Dr. Hilleman developed 8 of the 14 vaccines routinely recommended: measles, mumps, hepatitis A, hepatitis B, chickenpox, meningitis, pneumonia and Haemophilus influenzae bacteria. He also developed the first generation of a vaccine against rubella, also known as German measles. The vaccines have virtually vanquished many of the once common childhood diseases in developed countries.

In addition, Dr. Hilleman overcame immunological obstacles to combine vaccines so that one shot could protect against several diseases, like the MMR vaccine for measles, mumps and rubella. He developed about 40 experimental and licensed animal and human vaccines, mostly with his team from Merck of Whitehouse Station, NJ. His role in their development included lab work as well as scientific and administrative leadership.

And as a sign of his humility, Dr. Hilleman routinely credited others for their roles in advances, according to his colleagues.

Vaccine development is complex, requiring an artistry to safely produce large amounts of weakened live or dead microorganisms. Dr. Offit once said, "Maurice was that artist: no one had the green thumb of mass production that he had." The hepatitis B vaccine, licensed in 1981, is credited as the first
